

Release Notes

Reports Enhancements

General Overview

By design, the "Pre-Filter" area of "Class/Camp Filters" for reports should ONLY affect the list of classes/camps displayed to be selected and SHOULD NOT affect the report results themselves. However, this is not how they are currently implemented across all reports that have this option.

The purpose of this task is to update the Pre-Filter behavior to be consistent across all reports where this section is included and to introduce additional "Choose Instructors" filters if needed to allow filtering the report results to only classes/camps to which specific instructors are assigned. We will also be adding a "No Instructor Attached" option to the "Choose Instructors" where appropriate.

How will this benefit me?

Making the Pre-Filter behavior consistent across reports will reduce confusion as to intended behavior whenever these filters are used. Adding a "No Instructor Attached" option to the "Choose Instructors" filter allows you to filter results to only include classes to which no Instructor has been assigned.

Where will I see these changes?

These changes will affect various reports available from the Office Portal's REPORTS page.

What is being changed/added?

- Updating the Pre-Filter behavior to be consistent across all reports where this section is included
- Introduce additional "Choose Instructors" filters if needed to allow filtering the report results to only classes/camps to which specific instructors are assigned.
- Adding a "No Instructor Attached" option to the "Choose Instructors" where appropriate.

How does this work with existing settings?

This update enhances existing reports and introduces additional filter options where needed. No new reports are being added, and no settings are being changed.

Important Note

Please note that this "Pre-Filter" option is not the same concept as the "Smart/Preset Filters." Smart/Preset Filters are pre-defined filters that can be saved so you don't have to select them each time. This "Pre-Filters" update applies to a specific list of classes/camps that can be selected and saved as part of a Smart/Preset filter.
